Aufgabe 1:

Aufgabe 2:

Aufgabe 3:

- a) For the EGD system, considering the need to efficiently manage user roles, handle potentially complex business logic, and possibly scale to a university-wide system, the MVC or 3-Tier architecture might be the more suitable choice.

3-Tier Divides the system into three logical and physical computing tiers: the presentation tier (client), the application tier (business logic), and the data tier (database).

Each tier can be scaled independently based on demand.

Separation of concerns across the tiers makes it easier to manage and update each tier independently. Security measures can be defined separately at each layer, enhancing overall system security.
